790 200 186
 Warsaw, Poland

Education

MSc	Warsaw University of Technology , Data Science	Warsaw, Poland Feb 2025 – present
BSc(Eng)	Warsaw University of Technology , Data Science Graduated Summa cum laude	Warsaw, Poland Oct 2021 – Feb 2025

Experience

Centre for Credible AI (CCAI) , Research Software Engineer	Warsaw, Poland
Working on projects pushing the frontier of explainable AI, including model validation with Generative AI.	Oct 2025 – present 9 months
Co-authored a scientific paper on explaining the decision-making process of deep lung cancer models using generative/diffusion models. Results were accepted for ICML 2026	
MI2 , Research Software Engineer	Warsaw, Poland
Worked on explainability of deep learning models using generative and diffusion models.	June 2024 – Oct 2025 1 year 5 months
Co-authored and presented a scientific paper at ICLR 2025	
Samsung Research , Python Developer	Warsaw, Poland
Worked on NLP research projects and developed internal CLI and web tools for data processing.	Aug 2022 – June 2024 1 year 11 months
- Developed and maintained NLP pipelines (automatic, CLI, Web) for both research and production - Completed time management training and applied PRINCE2 methodology basics	

Projects

Serolyzer (PvSTATEM)	https://mini-pw.github.io/SerolyzeR/
an R package for automated analysis of serological data, currently used in the PvSTATEM global initiative	2024 – 2026
- Currently maintaining the package, implemented parsing methods for many MBA data format - Designed and implemented a Shiny Application for non-technical users	
shrinkr	https://jgrzywaczewski.com/shrinkr/
High Performance Open-Source Python+C package for Covariance Matrix shrinkage and LDA	2026
Implemented novel covariance shrinkage methods in C, with bindings in Python	

Skills

Languages: Python, Rust, C, Java, JavaScript, TypeScript, TeX

Data Science: NumPy, Pandas, Scikit-learn, PyTorch (Fabric), Transformers, SHAP, vLLM, ONNX, R

Deep Learning & AI: Generative Models, Diffusion Models, Explainable AI, Computer Vision, NLP

Databases: PostgreSQL, MySQL, MS SQL Server, MongoDB, Redis, Hadoop

Compute & Cloud: SLURM, Kubeflow, GCP, Kubernetes

Web Development: Vue, Svelte, Flask, FastAPI

DevOps & Tooling: Git, Linux, Vim, Jenkins, GitHub Actions

About Me

My journey with programming began in 2017 when I taught myself basic C++. Over the years, my dedication and hard work have significantly expanded my skill set. In 2022, I joined Samsung Research as a Python Developer. My interest in machine learning was quickly recognized, and I have contributed to numerous Natural Language Processing (NLP) projects, both in research and implementation. Additionally, I developed internal command-line interfaces (CLI) and web tools for data processing. For nearly two years, I worked as a Research Software Engineer at MI², where I focused on explaining the decision-making processes of deep learning models using generative models, including diffusion models. This role also allowed me to present a scientific paper at the prestigious International Conference on Learning Representations (ICLR) in 2025. Currently, I am working with the Centre for Credible AI in Warsaw. Here, I am extending methods for model validation into medical and space domains, while also deepening my knowledge in contrastive learning models. Beyond my professional and academic pursuits, I served as the Vice President of the Mathematics Science Club.

Languages

Polish: Native speaker

English: C1 Proficient

Interests

Generative Models for Explainable AI: Generative AI, Diffusion Models

Explainable AI: Model Validation, Interpretability, Depoisoning

Mathematics: Probability, Statistics, Linear Algebra

Hobbies: Ping-pong, Music, Cooking
